

Knowledge and Understanding

Good discussion on the OWASP and CVSS and presented a good list of security issues. A clear rationale for ranking the risks would have improved the work. The vulnerability and risks are rightly identified however can be linked to the tools used. Merit

Application of Knowledge

A good annotation of vulnerability against the standards. Appropriate tools are used and applied to test the vulnerabilities but linking them to governance and compliance need elaboration to build up the rationale. Merit

Criticality

A good set of recommendations is suggested. Breaking them down is a good idea. Need rationale for tools and linking them to vulnerability for governance and compliance. GDPR and PCI DSS can link to the scanning exercise. Merit

Structure and Presentation

Some of the diagrams may not necessary, i.e. network diagram. The document is presented well with the aid of diagrams and charts. However, they need to elaborate more for rationale. Section heading are well selected. Good set of journal sare used. Merit
